Assignment 4

A challenge I faced in this assignment was figuring out how to organize this project, with the different folders and files. I was successfully able to complete each option of the assignment. This assignment really taught me how to connect the front end with the back end parts of the website. If the assignment had more time I would have liked to implement GUI into the project to make it more engaging as well as challenging. I feel that longer projects run into more challenges that we will face, and that provides numerous learning opportunities. One thing I wasn't able to add to my presentation was trying to add buttons that take the user to each of the options automatically from the presentation. For the sake of time, I added all of my files to a downloadable zip file that can be accessed by a downloadable link. Overall, I enjoyed this assignment. It helped refresh some of my knowledge working with python and flask.
